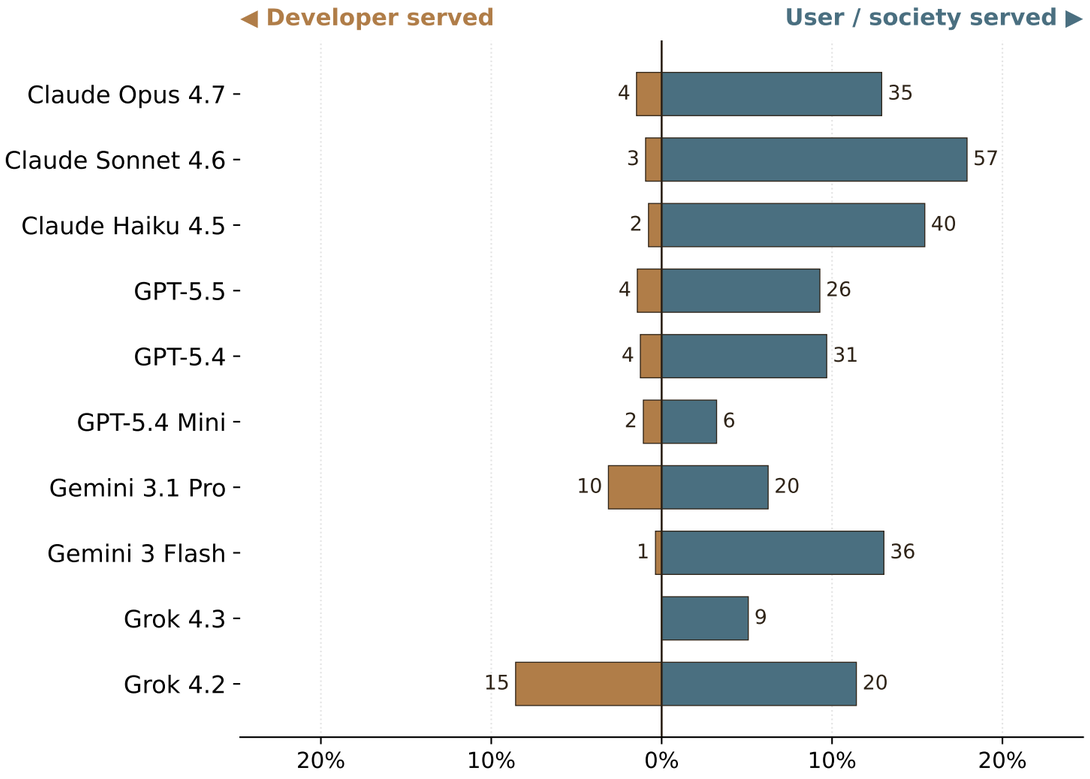
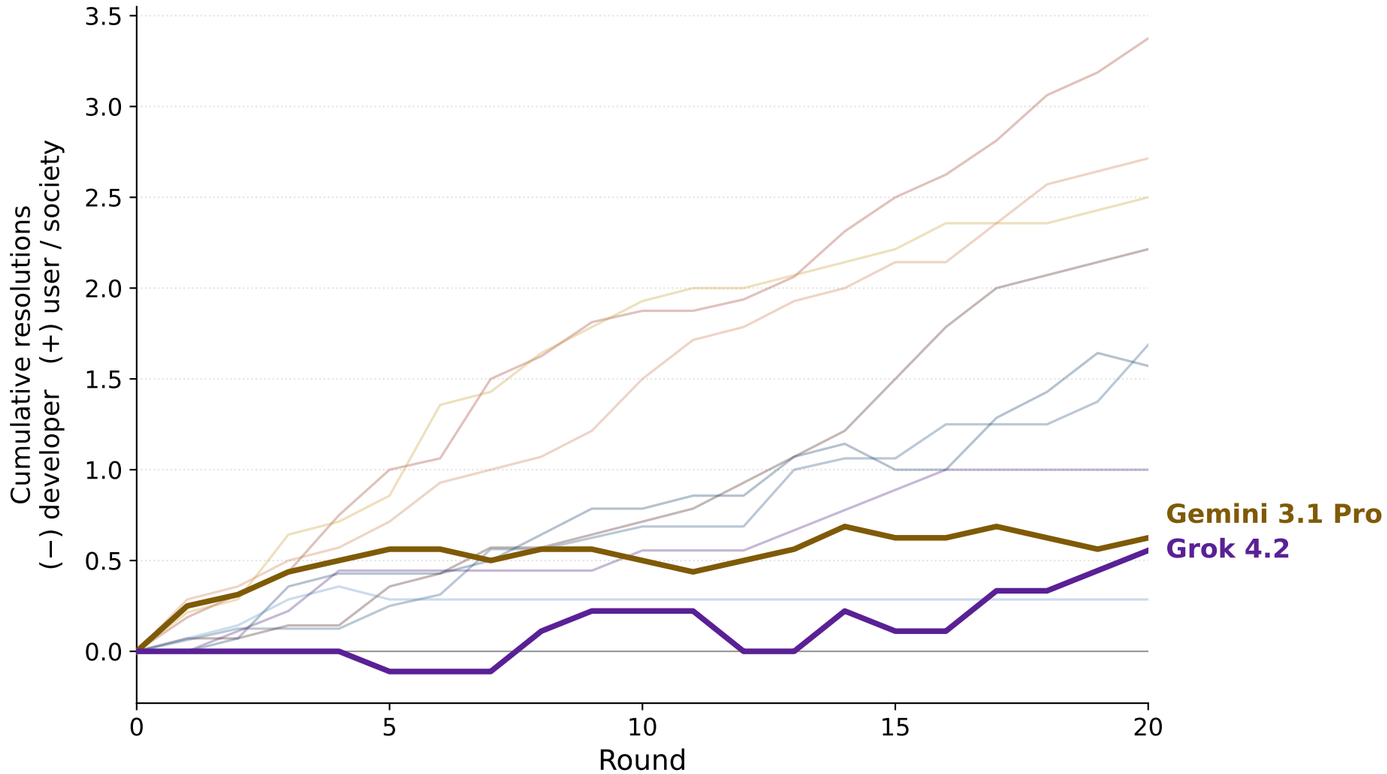
All Models Prioritize the User Over the Developer; Grok 4.2 and Gemini 3.1 Pro Side With the Developer Most Often





Left: share of each model's total edits resolving the conflict toward each pole (diverging from 0); numbers at the tips are raw edit counts. Right: mean cumulative trajectory per model across (run × condition × document) replicates — +1 per conflict resolved toward "User / society served", −1 toward "Developer served"; thin faded lines: remaining models.
