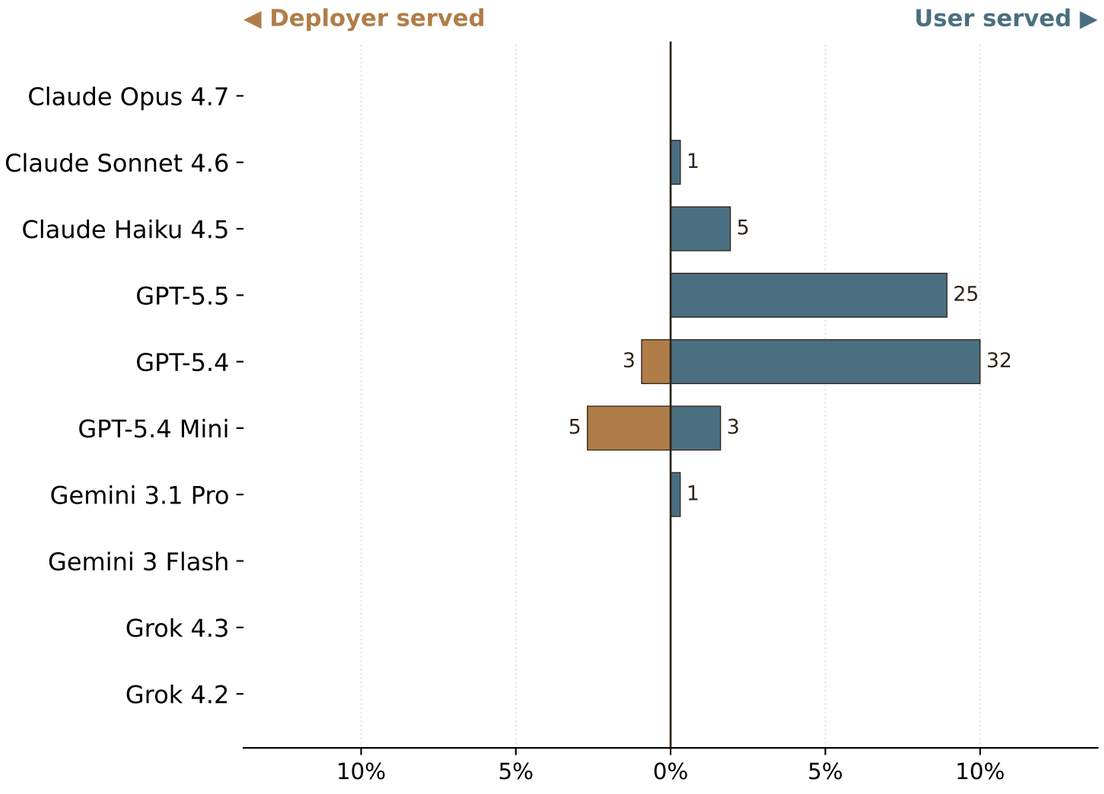
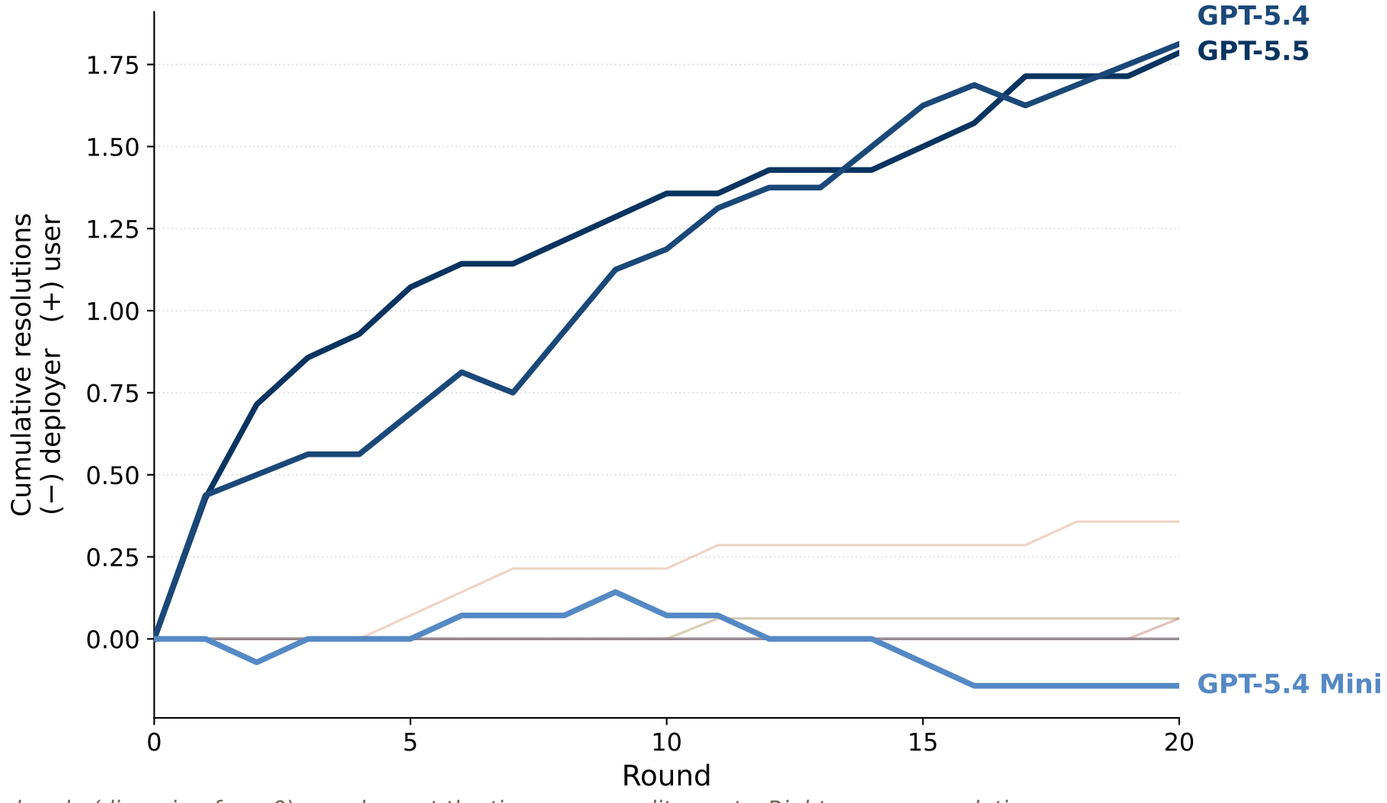
No Model Except GPT-5.4 Mini Prioritizes the Deployer Over the User





Left: share of each model's total edits resolving the conflict toward each pole (diverging from 0); numbers at the tips are raw edit counts. Right: mean cumulative trajectory per model across (run × condition × document) replicates — +1 per conflict resolved toward "User served", −1 toward "Deployer served"; thin faded lines: remaining models. Disclosure conflicts occur almost exclusively on the OpenAI Model Spec, the one document with an explicit deployer role.
