No Other Model Family Edits the Claude Constitution Like Claude Does

Shaded band: range of the home models' own leave-one-out distances on that document (dashed line = band max); Google and xAI have two home models, so their band collapses to a line.
p = Holm-adjusted (30 visitor × document tests; bold < 0.05) round-matched permutation test (5,000 permutations): within each round, edits are reshuffled between the visitor's run and the home runs.
There is one run per model × document, so the test cannot see between-run variation and is optimistic.
Home-like means "edits like the developer's own models", not faithful to the document — home models also drift on their own documents.
Robustness: headline pattern holds with judge-only, without Opus's no-CSAM cell, Gemma codes, Qwen codes, Muse codes; does not fully hold with conflicts-only (6/7 visitors beyond the band, 3/7 significant).
Per-visitor average distance ranges under single graders: Gemma 0.71–1.29, Qwen 0.53–1.29, Muse 0.58–1.04 (details: HOME_LIKENESS.md).
Average distance across each visitor's three foreign documents: Claude Opus 4.7 0.47, GPT-5.4 Mini 0.60, Claude Haiku 4.5 0.66, Claude Sonnet 4.6 0.84, GPT-5.4 0.89, Grok 4.2 0.91, Gemini 3.1 Pro 0.94, Gemini 3 Flash 0.97, GPT-5.5 1.16, Grok 4.3 1.18.

Distance = L1 over 7 per-cell means: judge score, and signed paternalism, harmlessness, structural, company-cost, welfare and disclosure scores (+1 per conflict resolved toward the right pole, −1 toward the left).
*Frame: cross-edit condition, applied edits (≤ 20 rounds), one run per model × document. Three-grader majority-vote codes. *Claude Opus 4.7's OpenAI cell is the no-CSAM variant of the Model Spec.*
